

# Air cushions for wrapping:

## on-demand instead of on-the-roll

Storopack is extending its range of AIRplus® air cushions with three new types of film. All three film types are ideally suited to replace conventional, pre-inflated bubble wrap.

As an on-demand system, AIRplus® reduces storage and handling costs and the AIRplus® machine system can be set up directly at the packing station.

### Flexible protective packaging solutions from Storopack

With a view to continuously improving the productivity of the protective packaging process, Storopack is looking at four protective packaging solutions:

- 1) "in-the-box": the best and most effective protection in a box
- 2) "into-the-box": the most efficient and ergonomic way of placing the protective packaging into a box
- 3) "around-the-box": the physical and digital integration of the protective packaging process into intra-logistics, taking account of a requirement-orientated automation solution
- 4) "out-of-the-box": the positive unpacking experience

The appropriate key questions (chart) capitalise on all the relevant resources. This holistic approach is part of an on-going process, and leads to the comprehensive and continuous optimisation of the customer's protective packaging process – with "Perfect Protective Packaging" being the aim.

# AIRplus® air cushions from Storopack

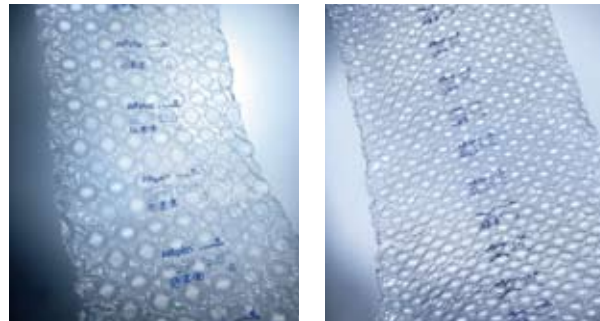

Storopack  
introduces new  
film types

Air cushions  
for wrapping:  
on-demand  
instead of on-  
the-roll

## New AIRplus® Bubble 29b and 53b

AIRplus® Bubble is now available in a standard width of 400mm (Bubble 29b) and a larger width of 700mm (Bubble 53b). A single film section measures 160 mm for both AIRplus® Bubble film types – typically 100 mm less than market standard.

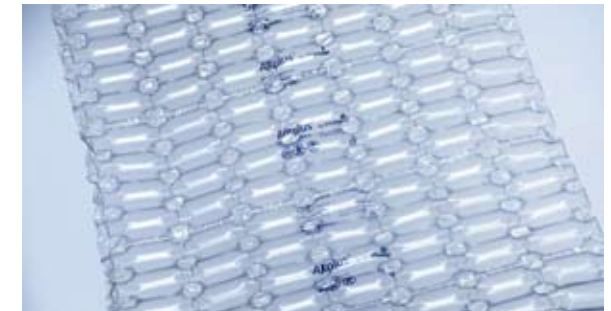

The advantage: AIRplus® Bubble is ideal for small items such as mobile phones or cosmetic packages, as well as narrow products such as fluorescent tubes. Its flexible size makes material consumption and protective packaging volume much more efficient.

## New AIRplus® Cushion 28p

The AIRplus® Cushion range will be extended with one new film type containing 28 air chambers per perforated section (Cushion 28p). The film is 675mm wide - perfect for wrapping larger items, such as laptops, in just a few easy steps.

A typical application for wrapping individual items can be found in mixed packages for online order fulfilment. Fragile goods must be protected against damage from the other products packed in the same outer box.

## Working Comfort from Storopack

Usually, if a distribution centre uses rolls of pre-inflated bubble wrap at the packing station, one person must always be available to marshal replenishment stock. This is no longer necessary with the introduction of an on-demand AIRplus® cushion system.

Storopack's concept of "Working Comfort" also allows users to maximise work space using a lift delivery system for dispensing of the AIRplus® products at the work station.
