

Paper Cushions in a Flash

PAPERplus® Shooter³

Storopack's new PAPERplus® Shooter³ paper cushion system can process up to 160 meters of paper a minute

Metzingen, January 2024. If you need a system that can produce protective packaging materials for your packaging process at lightning speed, then look no further than the PAPERplus® Shooter³. Storopack's new, ultra-fast paper cushion system can process up to 160 meters of recycled paper a minute and create paper cushions designed to fill voids in boxes and perfectly protect shipping goods. Storopack was able to increase the production speed of the PAPERplus® Shooter³ by 20 meters per minute compared to the previous generation. The compact, lightweight machine is very user-friendly and is available as a standalone version and a tabletop model, enabling flexible integration into any production process.

Automatic or On-Demand

The PAPERplus® Shooter³ offers convenient production of paper cushions in the desired length directly at the packing station. These paper cushions create volume in the box and therefore optimize cushioning and filling. The simple-to-use machine offers three operating modes (automatic, manual, and on-demand), making it easier than ever to tailor paper cushion production to specific packaging processes. Thanks to an adjustable height, a head that swivels up to 40 degrees, and an integrated cutting device that automatically separates the paper cushion at the desired length, the practical freestanding version makes work more ergonomic.

The ultra-reliable PAPERplus® Shooter³ paper cushion system not only offers users high-speed production, but also requires minimal maintenance, ensuring companies are always on the safe side when it comes to their packaging process.

PAPERplus® Shooter³ is very fast and very easy to use. **Image: Storopack**

The paper pads of the PAPERplus® Shooter³ can be used to fill voids in boxes and thus perfectly protect the shipping goods. **Image: Storopack**
